Install git specific version

Refer this link to down load particular version.

https://mirrors.edge.kernel.org/pub/software/scm/git/

1. wget https://mirrors.edge.kernel.org/pub/software/scm/git/git-2.29.0.tar.gz

2. tar -xvzf git-2.29.0.tar.gz

3. cd git-2.29.0/

4. make configure

```
[ec2-user@ip-172-31-38-4 git-2.29.0]$ make configure
    GEN configure
/bin/sh: autoconf: command not found
make: *** [configure] Error 127
[ec2-user@ip-172-31-38-4 git-2.29.0]$
```

5. sudo yum install autoconf -y

6. make configure

```
[ec2-user@ip-172-31-38-4 git-2.29.0]$ ./configure
configure: Setting lib to 'lib' (the default)
configure: Will try -pthread then -lpthread to enable POSIX Threads.
configure: CHECKS for site configuration
checking for gcc... no
checking for cc... no
checking for cl.exe... no
configure: error: in `/home/ec2-user/git-2.29.0':
configure: error: no acceptable C compiler found in $PATH
See `config.log' for more details
```

7. sudo yum groupinstall "Development Tools" -y

8. ./configure --prefix=/usr
